Helpdesk

Security and GDPR best practices

Screenshot_2020-04-29_at_19.1 Getting started

In this article, you can find information about best security practices when using the Tau Ceti admin panel and contacting the Tau Ceti helpdesk team.

Table of contents:

1. [TC account best practices](#)
 1. [Account sharing](#)
 2. [Strong password](#)
 3. [Enabling Google Authenticator](#)
 2. [Data sharing](#)
-

Screenshot_2020-04-29_at_19.1 TC account best practices

If you have a local account on any Yves Rocher admin panel website or a Tau Ceti Global Authorization Center you should follow the following steps to ensure that your account is secure:

Account sharing

Your account is only yours and shouldn't be shared with other employees and 3rd parties. Sharing your account information creates a high risk of a data leak, and any actions on your account show in the system log with your e-mail address. In case there is a need to create an additional account for an employee please contact the Tau Ceti helpdesk at helpdesk@tauceti.email or contact your direct supervisor.

Strong password

Your password should be strong and hard to guess. It shouldn't contain obvious information like your name, date of birth, company name, etc.

A strong password should contain:

- Lowercase letters (i.e. a, b, c)
- Uppercase letters (i.e. A, B, C)
- A number (i. e. 1, 5, 9)
- A special character (i.e. !, %, #)
- A length of a minimum of 8 characters

Your password should additionally be different than the rest of your passwords.

Examples of weak passwords:

Password123, YvesRocherTomas321, Michael20051989

Examples of strong passwords:

^vJ5a7RF6x!A@wB,chEwbAccAp!ZZa531

Tau Ceti system will not allow you to set your password without the requirements described above.

Enabling Google Authenticator

As on the TC admin panel and GAC platforms 2-factor authenticator is required and enabled by default currently you use the SMS messages to log in to your account. We highly recommend enabling the Google Authenticator, which uses the phone app to generate secure codes, which allow you to log in without receiving SMSes. It is a more secure authenticator method as well as more reliable, as it is possible to log in even when there is an outage in the SMS provider.

You can find information on how to enable and configure the Google Authenticator in the [Google Authenticator](#) article.

Screenshot_2020-04-29_at_19.1

Data sharing

Various data and data types are shared between co-workers as well as between companies. There might be a request sent to the Tau Ceti helpdesk, which requires sending data containing customer data.

Sharing sensitive data should proceed with caution and attention, as sensitive data should be received and seen only by the receiving party without the risk of a third party being able to see the information.

In order to ensure that the data is sent securely please follow the following requirements:

- If the information is available in the admin panel, please provide the link or necessary, non-personal information like order number instead of providing sensitive information like customer name, surname, and address. This will allow us to still find and check the customer without the risk of sharing their personal information.
- If the information is in an external file like a .xlsx Excel file do not share it directly.
 - Pack the necessary files into a .rar, .zip or .7z with a password using an application like Winrar or 7zip. Do not share this password with any third parties
 - The created password should be sent to the recipients by the SMS message.
 - After the request has been fulfilled and the attached file is no longer necessary the file should be deleted from the computer or secured.

Processing of request on the Helpdesk

Screenshot_2020-04-29_at_19.1 Getting started

The article contains essential information and procedures regarding requests and tasks raised by the Helpdesk team.

Table of contents:

1. [General information](#)
2. [Request types \(Helpdesk vs DEV\)](#)
3. [Helpdesk working hours](#)
4. [Helpdesk reaction time](#)
5. [Request categorisation](#)
6. [Definition of PRIO1](#)
 1. [What is the key process?](#)
7. [Definition of PRIO2](#)
8. [Raising requests - best practices](#)
9. [View of a sample answer sent by us from Easy Redmine system](#)

Screenshot_2020-04-29_at_19.1 General information

Helpdesk request Workflow

- EasyRedmine is a bug tracking system that we use to handle customers' requests.
- To send any kind of request, just send an email to helpdesk@tauceti.email.
- After a while, the system registers the ticket and we confirm its acceptance.
- Our answers are sent directly from the Bugtracker level and then they reach the sender by the e-mail message.
- The e-mail sent to helpdesk@tauceti.email may contain everything that the standard mail message contains.
- If you want to reply to a message received by us - simply reply to the email you have received.

POWERPNT_u9XaYSFyuP.png

Screenshot_2020-04-29_at_19.1 Request types (Helpdesk vs DEV)

In general, requests are divided into two types:

Helpdesk requests

- All requests described later in this article

Dev requests

- DEV requests are non-standard requests that require the involvement of the development team in order to execute a given request (e.g. a request that cannot be executed by the HD team using the administration panel).
 - All DEV-type requests should be processed on Asana.
-

Screenshot_2020-04-29_at_19.1

Helpdesk working hours

Helpdesk provides technical support to the client and is available in the following periods:

Monday-Friday 1)	
Helpdesk working hours	09:00-17:00 hrs CET
Emergency Operator Support 2)	17:00-24:00 hrs CET

1) excluding Polish public holidays

2) only Blocking Anomalies can be reported in Emergency Operator Support time.

Saturday-Sunday 3)	
Helpdesk working hours	none
Emergency Operator Support 4)	09:00-17:00 hrs CET

3) excluding Polish public holidays

4) only Blocking Anomalies can be reported in Emergency Operator Support time.

Emergency Operator should be contacted by e-mail: helpdesk@tauceti.email or by phone +48660599425 (Robert Wrębiak), +48660599416 (Maciej Bochyński).

Screenshot_2020-04-29_at_19.1

Helpdesk reaction time

Helpdesk reaction time

Priority	Event	Response Time	Report Delivery Time
PRI01	Blocking Anomaly	2 hours	8 hours

PRI02	Major Anomaly	1 working day	2 working days
PRI03	Anomaly	2 working days	5 working days

Emergency operator reaction time

Priority	Event	Response Time	Report Delivery Time
PRI01	Blocking Anomaly	Monday-Friday: 4 hours Saturday-Sunday: 6 hours	8 hours
PRI02	Major Anomaly	Not supported	Not supported
PRI03	Anomaly	Not supported	Not supported

Definitions

Response Time - specifies the maximum time period before the Helpdesk (or Emergency Operator) confirms receipt of the issue notification and assigns priority to this issue.

Report Delivery Time - specifies the maximum time period between Response Time and the moment of delivery of the progress report on the issue to the CUSTOMER. The progress report will include: the status of the issue, verified priority level, estimated time of the solution or proposal for temporary solution if available.

Screenshot_2020-04-29_at_19.1

Request categorisation

Requests in the context of importance are categorised into:

- **PRI01**
- **PRI02**
- **PRI03**
- **Non-issue**

PRIO1 - this corresponds to SLA category 1 requests, i.e. failure of critical services.

PRIO2 - this corresponds to SLA category 2 requests, i.e. partial failure of critical services or non-critical services.

PRIO3 - all incidents/problems that are not PRIO1/2.

Non-issue - request of nature (examples):

- request for support in explaining how the mechanism works - "how to"
- An idea or a suggestion

info2.svg **Remember**

It is possible to automatically mark a sent e-mail request as PRIO1, PRIO2 or PRIO3. To do that you have to type the priority level in the e-mail title for example:

PRIO1 Slovakian website is not working

PRIO2 Unable to search for products on PL PROD

PRIO3 Product is not visible on CZ PROD

By doing that it will allow us to react to the issue more swiftly. Please remember that it is case-sensitive, so our system won't recognize "**Prio1**", or "**PRIO 1**". It has to be "**PRIO1**".

Screenshot_2020-04-29_at_19.1

Definition of PRIO1

The PRIO1 request is a serious problem with the highest priority. There is a separate handling procedure for this request. Types of problems that can represent the definition of "PRIO1":

- Entire unavailability of the website, where the website means a full set of pages available under a given domain (desktop/mobile), for all users
- The time of loading pages of the website excludes the use of the website, for all users
- The key process does not work for all users
- The integrity of key data has not been preserved
- The security of key data has not been preserved
- The security of personal data has not been preserved
- Unauthorized access to the system

- Unauthorized change of data

What is the key process?

Key process - division:

1. From the customer side:

- User registration
- User login
- Order execution
- Functionalities in the basket enable the execution and finalization of the order

2. From the business user's side:

- Logging in to the administration panel
- Failure of the administration panel element to act directly and immediately affect key processes for the consumer (for example support of the *on/off-site* functionality)

3. From the system side:

- The exchange of order data between the web platform and the logistics system ("YRMA Logistics") does not work in a way that affects the key processes for customers
- The exchange of payment data does not work in a way that affects and is visible to customers
- The failure of integrations that directly affect the operation of key processes for customers

Screenshot_2020-04-29_at_19.1

Definition of PRIO2

PRIO2 requests are partial failures of PRIO1 type critical services, however:

- Their occurrence is not massive or continuous
- Critical processes are not interrupted

Examples of problems that can be classified as "PRIO2":

- The order confirmation email is not sent to the customer, but the order itself can be placed correctly by customers
 - Partial unavailability of the website
 - Product search engine on the website does not work properly
 - Password reminder functionality does not work
-

Screenshot_2020-04-29_at_19.1

Raising requests - best practices

1. Giving the appropriate title to the request. The title of the e-mail will be identical to the title of the registered request in our bug tracking system. The appropriate title will significantly improve the detection of the source of the problem.
2. One email sent to helpdesk@tauceti.email causes one separate ticket to be registered in our system. Therefore, the commonly used, best and strongly recommended by us practice is to describe one problem in one email.
 1. Applying threaded answers to our feedback to avoid generating new tickets which would be duplicated.
3. Giving as many details as possible about the request. This will make it much easier for us to detect the problem and solve it more efficiently.
 1. Giving exact reproduction steps.
 2. Adding bug illustrating attachments (screenshot, video).
 3. Providing information when a problem occurred.
 4. Determining where the problem occurs - only on the desktop version, only on the mobile version or on both.
 5. Determining whether the problem was one-off or repeatable.
 6. It is often useful to provide information about the device on which the problem occurred.
 1. device model
 2. operating system version
 3. information about the browser (and the version you are currently working on)
4. Information on whether the problem occurs in a mass/global scale or only for one user.
5. Specifying the environment in which the problem occurs.

6. In case of a PRIO request by typing in the e-mail title **PRIO1**, **PRIO2** or **PRIO3** you will change the priority of a task in our system automatically to the written PRIO level. This will allow us to handle your request swiftly.

General information

Screenshot_2020-04-29_at_19.1 Getting started

Zendesk is a service that gives access to various support tools, in this case, a Knowledge base. Our knowledge base is a searchable directory of content and documentation regarding the Tau Ceti admin panel, its functionalities, and integrations. The Knowledge base can be accessed through the <https://tauceti.zendesk.com/hc/en-us> link.

You can also create an account, which can be used to publicly comment on the articles and get information when they get updated by following them.

On the home page of the Tau Ceti Zendesk knowledge base, you can find:

- (1)**- Search bar, which allows you to search in our library of documentation. You can search here only by the article's name.
- (2)**- Categories, where the articles are located. You can find more in the [Articles overview](#) section.
- (3)**- Recent activity, which shows which documentation got updated recently.
- (4)**- Submit a request button, which allows you to contact us in case of questions or suggestions. You can find more about this topic in the [Contacting Tau Ceti](#) section.
- (5)**- Sign-in button, which allows users to create an account and sign in to it. You can find more about creating an account in the [Creating a Zendesk account](#) section.

Table of contents:

1. [Articles overview](#)
2. [Creating a Zendesk account](#)

Screenshot_2020-04-29_at_19.1

Articles overview

When you have selected the desired category, you will be redirected to the category page.

POWERPNT_RaHKBndLww.png

Visualization of the articles located in the category

On the category page, you can find all the articles assigned to this category **(1)**, and you can also follow the category or an article using the Follow button **(2)**. Following a category or an article will e-mail you an update whenever an article has been updated

POWERPNT_Q9D6xd753C.png

Visualization of the bottom of the article

In the articles at the bottom of the page users are able to vote if the article was helpful **(3)**, see all the related articles to the current one **(4)**, and see, and create public comments on the articles **(5)**.

Screenshot_2020-04-29_at_19.1

Creating a Zendesk account

Users are able to create their own Zendesk account in order to follow the articles and categories, as well as to comment on the articles or just contact us. In order to create the account you have to press the **Sign in** in the text at the top of the page.

POWERPNT_S5NZSHGPQz.png

Visualization of the sign in window

In the sign in window, you can log in with your already created account **(1)**, sign in using Google or a Microsoft account **(2)**, or create a new account using the Sign up text **(3)**.

POWERPNT_xeBjUUy8y5.png

Visualization of the Sign up window

In the Sign up window, you have to type your full name and e-mail address.

POWERPNT_ss5wnmb5VC.png

Visualization of the sign up information

By pressing the Sign up button you will see a message, that a link with a new password has been sent to your e-mail address.

POWERPNT_948wFz97zZ.png

Visualization of the e-mail message

In your e-mail inbox, you will find a message from Zendesk with a link to the password creation.

POWERPNT_DUvT5wjb5J.png

Visualization of the password set up window

In the password creation window, you have to type your password that is at least 6 characters long, different from your email address and include letters in mixed case, numbers, and a special character.

Screenshot_2020-04-29_at_19.1

Contacting Tau Ceti

If you have any questions or suggestions regarding the articles you can contact us via the e-mail address helpdesk@tauceti.email, or by using **Submit a request** function on a Zendesk platform.

POWERPNT_b65SfB3JuH.png

Visualization of the Zendesk contact form

On the Zendesk contact form, you have to type your email address, a subject, and a description of the message. You are also able to attach the attachments with your request.

When typing the subject of the message, the Zendesk platform will suggest possible articles, that might help with your problem or question.
